

Comune di Ravenna

Ravenna, gennaio 2021

To the POLIS network

## Letter of intent

The quality of life in urban areas cannot be separated from a sustainable management of mobility.

The objective for sustainable mobility is to allow citizens to move around freely, but at the same time containing the negative effect of traffic, that is air and noise pollution.

Talking about sustainable mobility in an urban environment, therefore, means to lead residents and city users so that they can give priority to walking, cycling or public transport.

This behaviour contributes to the improving of the environmental conditions and the quality of the places, to the re-appropriation by citizens of public spaces occupied by vehicles, especially those parked, increasing the quality of life for residents and tourists.

The State and the Regions develop guidelines for sustainable mobility but it is in the municipalities that the most effective measures must be taken in urban and peri-urban areas.

In order to achieve the objectives of mobility sustainability, it is necessary the exchange of experience with virtuous communities with advanced degrees of technology and high levels of mobility planning.

For this reason, the Municipality of Ravenna in addition to equip itself with the most important tools of governance of sustainable mobility, participating to recent European projects, has promoted training, communication and collaboration with the most advanced realities.

The registration to such a prestigious network as POLIS is to be considered as the achievement of a milestone of great importance that places the city of Ravenna as a subject available for the most qualified collaborations.

Councillor for Mobility

Municipality of Ravenna

**Roberto Giovanni Fagnani**

Progettazione, programmazione, affidamento,  
direzione lavori di lavori pubblici e delle  
manutenzioni; gestione espropri.
